

1

504 oxygen absorber packets are vacuum packed in master bags. If a master bag loses its vacuum sealing, and the packets can slip when you hang the bag, please DO NOT use the packets in this bag.

2

After opening a master bag, you may spread out the needed quantity of sachets in a tray for usage.

3

The remaining sachets should be resealed in the master bag after pressing out the air from the bag, or using a vacuum heat sealer to seal.
